

BUYER'S GUIDE:

Choosing the Right Infant Protection System for Your Smallest Patients

From the moment a baby is born, we want to keep them safe and warm. Unfortunately, even within the confines of a hospital, danger lurks and the risk of abduction is present. That's why implementing a reliable infant protection system in any obstetric or pediatric environment is a high priority.

With over 30 years of experience, there's a reason the Cuddles infant protection system is the market leader. It's secure, comfortable, easy to use and affordable. This guide will review how our system is unique compared to other infant protection systems as well as hidden costs to look for when evaluating solutions.

What to Look for in an Infant Protection System

Provide infinite comfort with our self-adjusting soft bracelet

Comfort is of utmost importance for every infant, and an infant protection bracelet shouldn't harm an infant in any way. Our ultra-soft polyester blend bracelet puts infants' comfort first and won't cut or chafe their delicate skin. While it's soft, it's also secure. From the smallest of preemies to full-term babies, our self-adjusting bracelet will stay safe and secure on infants of any size.

We all know that the first hours of a baby's life are crucial. These hours are full of change including initial weight loss. Guarantee that all infants stay secure with the Cuddles self-adjusting bracelet that will adapt to each baby's fluctuating weight. By self-adjusting to each baby's weight changes, the bracelet won't fall off or become loose when little ones wiggle around. And since the bracelet stays nice and secure, false alarms triggered by postpartum weight loss are avoided.

"Our parents love the soft, stretchy bands because they provide exceptional comfort and security for their newborns."

—Sally Johnson, Director of Maternity

Rest assured that every baby is safe with our tamper-proof infant protection tag

Safety of every infant is top-of-mind in any obstetric or pediatric environment. An infant protection tag should be reliable as well as small, lightweight and easy to keep clean. The Cuddles bracelet is just that and its design means it will never hinder an infant's movement as only the soft, adjustable band touches the

infant's skin. While the tag rests securely on the infant's bracelet, never coming in contact with their skin, a pulsating red light is also easily visible to nurses as a continuous visual indication that the tag is active.

Equipped with patented skin sensing technology, the Cuddles bracelet activates an alarm in the case that it is cut or yanked off an infant's arm or leg. At the moment a bracelet or tag is tampered with an alarm is activated to alert staff and the perimeter of the unit is locked down. Be comforted with the most reliable technology to prevent abductions and ensure the safety and security of every infant.

Know that infants are always secure with our independent system

Maintain constant security and safety of your obstetric and pediatric floors with an infant protection system that is not dependent on a PC or server. This means if your network or PC were to fail, your secure perimeter remains intact and all alarms will continue to fully function. Be sure every infant is protected from the moment they are born with no enrollment necessary for instant protection. Should your software ever crash, you can rest assured knowing your infant protection system is still fully functional and every infant is secure. Cuddles is the only infant protection system that is software enhanced, not software dependent.

Experience fewer false alarms with our unique frequency technology

Know that your alarm system is reliable with fewer false alarms. Our Cuddles system uses unique RFID technology, data filtering and changing exciter frequencies to identify and eliminate potential noise issues. Many other systems alarm when the correct frequency is seen, even if it is generated from ambient noise like mobile phones, lighting ballasts and floor buffers. The Cuddles infant protection system operates at a unique frequency (418 MHz), just below the maximum requirement

mandated by the Department of Defense, making it the most interference free on the market and reducing hassle and disturbance caused by false alarms.

Want even fewer false alarms? In addition to minimizing false alarms due to ambient noise, the Cuddles system also eliminates “loose band” alarms as its self-adjusting bracelet always remains safe and secure on every infant.

Wondering about compliance? Wonder no more; the Cuddles system is compliant with all NFPA, FCC, NEC, CA, ETL and JCAHO requirements.

Streamline admittance and discharge with our easy-to-use system

With a simple system in their hands, nurses can activate tags as well as admit and discharge patients in moments. Easy-to-use hardware and software work seamlessly, enabling nurses to spend less time managing a “system” and more time focusing on what matters most: caring for moms and babies.

Benefit from seamless integration with systems that are already in place

The need for real-time notifications and response is essential in the case of infant abduction. An infant protection system is only effective if it can relay the right information at the right time to the right people. It should also be able to seamlessly integrate with platforms and devices that already exist within staff processes.

Your infant protection system should simplify your process, not add complexity. Think about your:

- Nurse call system.
- Electronic access control (EAC).
- CCTV/camera system.
- Pagers, beepers or any other mobile devices carried by caregivers.
- iOS or Android devices.
- Any other internal systems that will enable your infant protection system to work seamlessly within your facility.

With the Cuddles infant protection system, you'll have all the information you need at your fingertips. Whether it's with our handheld Identification Tag Activator/Deactivator (IDTAD) or the stationary Test Tag Station (TTS), you can see all the details of a particular infant's tag. Each will let you see the remaining battery life, warranty date, and program number of every tag. Gain even more insight with the ability to see tag notes and report on all tag data with the Test Tag Station (software required).

Gain access to comprehensive support with our vast network of dealers and 24/7 support

Get the support you need when and where you need it. Take advantage of the industry's most comprehensive customer support program with free 24-hour technical support and a full one-year warranty. Should anything go wrong on-site, one of our local authorized dealers will be there to service the system—no need to wait for a technician to fly in.

"One of the key factors to us was a local source for support and maintenance. We aren't dependent on technicians having to fly in or support it remotely. They can be on-site quickly if we need them."

—Coral Ann Hackett, Director of the Family Center

Evaluating An Infant Protection System

Choosing an infant protection system is a big commitment of both finances and resources. A system this important takes time to implement and should be one that you feel confident in for years to come. Make sure you are making the best decision for your facility by asking the right questions of your potential vendor.

System

1. Do you offer just one infant protection solution, or multiple options based on budget and needs?
2. What customization options does your system offer?
3. What integration options does your system offer?
4. Can your system lock doors and stop elevators if needed?
5. Is there an option for a comprehensive system without the need for a computer? Conversely, is there an integrated software platform as a potential upgrade?
6. Where will there be remotes, LCD screens, alarms, etc.?
7. What does it look like to manage the system day-to-day?
8. What does the admittance/discharge process look like?
9. Will the system still work if a PC or server stops working?
10. What happens if a baby is born when a PC or server is down? Will the tag still work and be able to protect the infant?

Alarms

1. Is your system shielded from RF interference from things like cell phones or floor buffers? How is this accomplished?
2. How precise is your alarm capability? Can it distinguish between multiple floors, or two doors that are close together?
3. Does your system have more than one type of alarm, and how does staff differentiate between these alarms?
4. When an abduction alarm is set off, who is notified, how and where? Do we have configuration options?
5. Is there reporting easily available so you can see recent alarms, with a date/time stamp?

Infant Tags and Bands

1. Do I need to throw away the tags at 12 months, or can I keep using them past the warranty period? Can the tags be turned on and off when not in use?
2. Can you see the exact battery percentage and warranty date from a tag test station or handheld device?
3. Is there multiple floor monitoring?
4. Do your tags identify specific infants?
5. When an abduction alarm is set off, can we tell which infant it is?
6. How comfortable is your band/tag?
7. Will an alarm be set off if the baby loses weight after birth and the tag is loose? Will an alarm be generated every time a tag is simply too loose, or only when it is removed?
8. How quickly does the system respond when a band is removed?
9. Is mother-baby match available? And how much does mother-baby match cost?

Support

1. What is the training and implementation process? What is the cost?
2. What technical support is available?
3. Who installs the system?
4. Who will support the system?
5. How much will it cost for annual software upgrades?

Vendor Comparison Chart

Take note of the support offerings and product costs for each provider of infant protection systems. We're proud to say that the Cuddles system will save you thousands of dollars each year in licensing, training and support fees—at Accutech we stand by you for the life of your product.
