

Monitor. Alert. Prevent.

MyRaina combines an AI-enabled clock sensor, a caregiver app and insight dashboards to detect falls and fall risk, support rapid response and guide prevention. Designed to work alongside your care team.

Wall-Mounted Clock Sensor

MONITOR

No Resident Video

No resident video or audio is recorded, stored or transmitted. 24/7 monitoring uses body-position data only. No wearable needed.

ALERT

Caregiver Response

Alerts average less than 10 seconds after detection. The app supports iOS, Android and RCare devices; staff sees who is responding.

PREVENT

Private Event Review

Animated skeletal replay explains events without resident video. Personalized alerts and heatmaps guide care plans; dashboards track fall trends.

Built for resident dignity and practical deployment

Privacy: Body-position data only. Event review uses animated skeletal replay, not video.

Deployment: A familiar wall-clock design, AC power, Wi-Fi and app-guided setup.

Workflow: Remote upgrades, incident capture and automated reporting reduce manual work.

A fit for your senior-living portfolio

VALUE ADDED RESELLERS

Add AI fall management alongside nurse call, wander management, access control and other resident-safety solutions. Simple installation and remote upgrades support deployment and ongoing service.

MANUFACTURING PARTNERS

Connect your dealer network with a complementary fall-management offering. Explore opportunities to introduce MyRaina through VARs already serving senior-living communities.
